

Student Hub Platform

Information Technology Management

University of Primorska – FAMNIT

Academic Year 2025/2026

Team Members

- Andrej Stojančić – Backend Development
- Rastko Petrović – Frontend Development
- Bobo Petrović – Documentation
- Aleksa Radović – Quality Assurance & Testing

Project Introduction

- **Students currently use disconnected tools for studying and communication**
- **Materials and information are scattered across multiple platforms**
- **Student Hub Platform centralizes academic life into one system**

Project Goals

- Centralized study material repository
- Academic progress tracking
- Student discussion forums
- Event management and reminders
- Peer collaboration and engagement

Technology Stack

- Frontend: React, Bootstrap, Axios
- Backend: Node.js, Express.js
- Database: PostgreSQL
- Authentication: JWT
- ORM: Sequelize

Development Methodology

- Agile development process
- Sprint planning and task assignment
- Continuous testing and reviews
- Iterative improvement based on feedback

A diagram for a stakeholder analysis. It features a large red speech bubble on the left containing the text "Stakeholder Analysis". To the right of the speech bubble is a list of five stakeholders, each preceded by a red square bullet point. The background of the slide has faint, curved, concentric lines in the top-left and bottom-right corners.

Stakeholder Analysis

- **Students – collaboration and resource sharing**
- **Student organizations – event promotion**
- **Professors – secure and reliable material sharing**
- **Tutors – concerns about shared paid materials**
- **Project team – skill development and successful delivery**

User Personas

- Ana – first-year student needing organization
- Marko – senior student mentoring colleagues
- Sara – Erasmus student facing language barriers

Research & Hypothesis Testing

- Students rely on Moodle, WhatsApp, Discord, and Google Drive
- Most requested features:
 - Material sharing
 - Discussion forums
 - Progress tracking
 - Event tracking

Main System Features

- Authentication and student profiles
- Study material upload/download
- Discussion forums
- Academic progress tracker
- Event management system
- Administrator dashboard

System Architecture

- Presentation Layer – React frontend
- Application Layer – Node.js & Express backend
- Data Layer – PostgreSQL database
- Scalable and maintainable three-layer architecture

Sprint Plan

- Phase 1: Authentication, profiles, materials module
- Phase 2: Progress tracking and forums
- Phase 3: Event tracker and admin dashboard

User Testing

- **Moderated usability testing sessions**
- **Tasks included registration, uploading materials, event navigation**
- **Users requested clearer upload guidance and simpler navigation**

Risks & Future Improvements

- Risks: server downtime, limited resources, low engagement
- Future improvements:
 - Mobile application
 - AI-powered recommendations
 - Better notifications
 - University system integration

The background of the slide features several thin, curved lines in light gray and white, creating a sense of motion and depth. A large, solid red shape, resembling a speech bubble or a stylized 'L' with a tail pointing down, is positioned on the left side of the slide. Inside this red shape, the text 'Final Conclusion' is written in white.

Final Conclusion

- The project successfully addresses fragmented student resources
- Students strongly supported centralized academic tools
- The platform provides a scalable foundation for future development

Thank You

Questions & Discussion
